

Corps Locks, a new publicly accessible web site is now available. The website contains lock and vessel specific information derived from the United States Army Corps of Engineers Lock Performance Monitoring System (LPMS). The information contained here represents hourly and daily snapshots of Freedom of Information Act (FOIA) data on U.S. flag vessels and foreign vessels operating in U.S. waterways that transited a Corps owned or operated lock structure. This site has the traffic and hydrologic information submitted by the locks via LPMS. This data replaces the same data formerly on the Navigation Information Connection. Information on detailed company or commodities is considered privileged information and is precluded from the Corps Locks website. Additional features are planned for future release. The URL is: <http://corpslocks.usace.army.mil/> Also available to assist the public are .com and .us URLs, a Facebook page and Twitter page.
